Manual Codes: X22-B03(Interior lighting; horns; portable emergency signal devices)

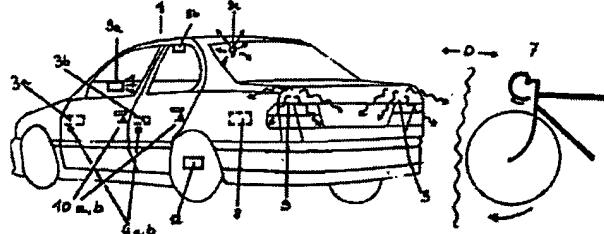

Derwent Abstract: (DE19537619A) A device for monitoring the opening of a car door has at least one traffic sensor (5) which determines the presence of another car or person near the door and a signalling system (9) to prevent the door movement as the other car or person draws near, plus an optical or acoustic (or both) system to indicate this approach.

The traffic sensor is activated by another sensor (4) near the door handle, using a capacitive technique. The activation range is up to twelve inches from the handle. The system only applies when the car is stationary. The space sensor also is used to measure car distance during reversing. A data bus and/or optic fibre cable are used in the system.

**Advantage** - Prevents accidents from opening the door in the path of an oncoming (overtaking) car, bicycle or pedestrian.
